The city of Chattanooga is requesting a STA for WQKJ941. The reason for the STA request is we need to add three additional channels to the system due to the growth of the P25 system including a cooperative partnership with the State of Tennessee Department of Safety. We have filed a license modification for WQKJ941 through APCO for the three additional 800 MHz frequency pairs. In order to find the needed spectrum, APCO is working to find a Nextel give-up 800 MHz frequency, which is a longer process than the normal 800 MHz process.

For the purpose of this STA we are only requesting to add two frequencies we currently have licensed on WPKT719 and will transition them from the conventional system into the trunk radio system. The two frequencies we are requesting are 810/855.98750 and 812/857.16250.

We hope you will approve our request so we can continue the testing and implementation of the new channels. If you have any questions please do not hesitate to contact me.

Respectfully,

Patrick C. Rollins
System Manager/Regional Interoperability Coordinator
